PREPARING FOR WINTER

DON'T FORGET TO.....

*Show some TLC to your furnace

- Clean your furnace annually and during the winter try to change your filter regularly, a dirty filter will decrease air flow and energy-efficiency.

*Get your DUCTS in a row – A home with central heating can lose about 20% of the air that moves through the duct system. Make sure your ducts are in order by properly sealing and insulating them and doing this may potentially reduce your annual energy bills.

*SPRUCE up the fireplace – Make sure your fireplace and chimney is clean and ready to go. Don't forget to keep your damper closed when you're not burning and using your fireplace.
